

Instant Hot Water Kettle “Billy”

Quick Start Guide

How the display works

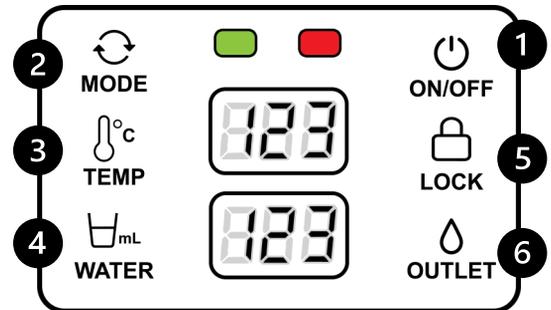

This is a Quick Start Guide Only. You should read the [full User Manual](#) for all instructions and safety advice.

Instant Hot Water Kettle “Billy”

How to pour water

To start, fill the Billy Kettle and securely place it on the base. Then follow the steps to pour hot water.

1 Press the **On/Off** button.

2 Press the **Mode** button once to select ‘Tap Water’.

The Green Light will turn on when ‘Tap water’ is selected.

3 Press the **Temperature** button to choose the temperature you want. It can be from 40 to 90 degrees Celsius. The temperature will increase 5 degrees each time you press the button.

4 Press the **Water** button to choose how much water you want to pour. It can be from 30mL to 400mL. Make sure the cup you’re using is large enough for the amount of water.

5 Press the **Lock** button **2 times** to turn off the safety lock. The water won’t pour unless you turn off the lock.

6 Press the **Outlet** button to pour water. The kettle will automatically pour the amount of water you chose in Step 4. You can Press the On/Off button if you want to stop the water before it’s finished pouring.

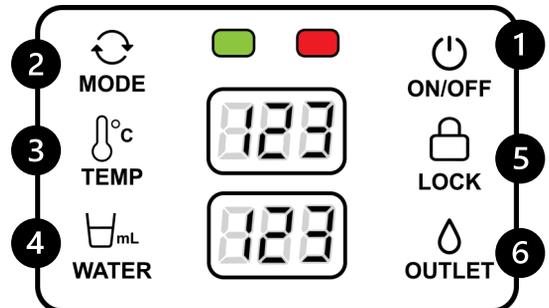

Instant Hot Water Kettle “Billy”

How to use water purify mode

Follow the steps to pour hot water with the Water Purify mode.

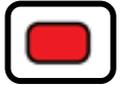

1 Press the On/Off button.

2 Press the Mode button 2 times to select 'Purify Water'.

The Red Light will turn on when 'Purify Water' is selected.

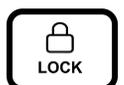

3 Press the Temperature button to choose the temperature you want. It can be from 40 to 90 degrees Celsius. The temperature will increase 5 degrees each time you press the button. **When you set the temperature**, the Kettle will boil for 3 minutes at 100 degrees Celsius. **Important:** The water will then gradually cool down to the temperature you set. If you select **CL** in the temperature option, the Kettle will gradually return to room temperature within 90 minutes

4 Press the Water button to choose how much water you want to pour. It can be from 30mL to 400mL. Make sure the cup you're using is large enough for the amount of water.

5 Press the Lock button 2 times to turn off the safety lock. The water won't pour unless you turn off the lock.

6 Press the Outlet button to pour water. The kettle will automatically pour the amount of water you chose in Step 4. You can Press the On/Off button if you want to stop the water before it's finished pouring.
